

JOSIAH Z. RONDON

Phone (203)-810-0834 • josiahrondon@gmail.com • [LinkedIn](#)

EDUCATION

Connecticut College, New London, CT
Major: Computer Science

Bachelor of Arts expected May 2026

SKILLS

Languages: Python, Ruby, Java, JavaScript, HTML, CSS, Node.js, JSON, SQL

Tools & Platforms: Git, GitHub, OutSystems, Azure, Docker, Intune, Jira

Skills: API Development and Integration (REST, OpenAI), OAuth 2.0, JWT, Generative AI

Development (LLM, Diffusion Models), Model Training & Fine-Tuning

Practices: Agile (Scrum), CI/CD, Algorithm Design & Implementation

Other: Spanish (Fluent)

WORK EXPERIENCE

Software Engineer Intern

June 2025 - Present

Yale Information Technology Services - New Haven, CT

- Built and deployed an AI-powered chatbot using OutSystems and AI Agent Builder to automate customer service workflows in SharePoint, reducing response time and improving accuracy.
- Designed and implemented a Layer 7 OAuth proof-of concept using Python, integrated with Yale Directory to streamline authentication across enterprise applications.
- Maintained continuous integration and delivery pipelines leveraging Scrum, Git/GitHub, Docker, and Jira for efficient development cycles.

Central ITS Technician Intern

June - August 2024

- Resolved a major CrowdStrike outage impacting 600+ Windows devices by collaborating with engineering teams to recover systems using BitLocker keys, Intune, and Azure Remote Desktop.
- Provisioned and configured 100+ Windows and Mac devices for secure integration into Yale's network environment.
- Delivered technical support for 60+ professional clients, ensuring 100% resolution and satisfaction through Azure, ServiceNow, and Intune.

Service Desktop Support Assistant

September 2024 - Present

Connecticut College IT Service Desk – New London, CT

- Improved first-contact resolution rate to 90% by troubleshooting hardware/software issues for Windows and Mac devices.
- Enhanced account security by managing DUO Mobile and password resets, reducing downtime by 25%.
- Streamlined communication using Gmail and Web Help Desk, increasing client satisfaction through transparent updates.

PROJECTS

Genomic Structural Variation Analysis Research

January 2025 - Present

- Developed an ensemble method integrating multiple structural variation callers and sequencing platforms to produce unified, high-confidence genomic variants.
- Created a novel algorithm to quantify microhomology patterns at SV breakpoints, revealing insights into mutational mechanisms and DNA repair pathways.
- Built a parallel processing pipeline for large-scale genomic datasets (e.g., 1000 Genomes Phase 4) and implemented semi-supervised machine learning models for variant analysis.
- Processed VCF files to detect patterns of MMEJ DNA repair using microhomology analysis and k-mer detection.
